

MNIST Diffusion Model Plots (1FA006)

Dabbugunta Hyndavi Anand

The Jupyter notebook can be found in this [GitHub repository](#).

Figure 1: Samples from the MNIST Dataset

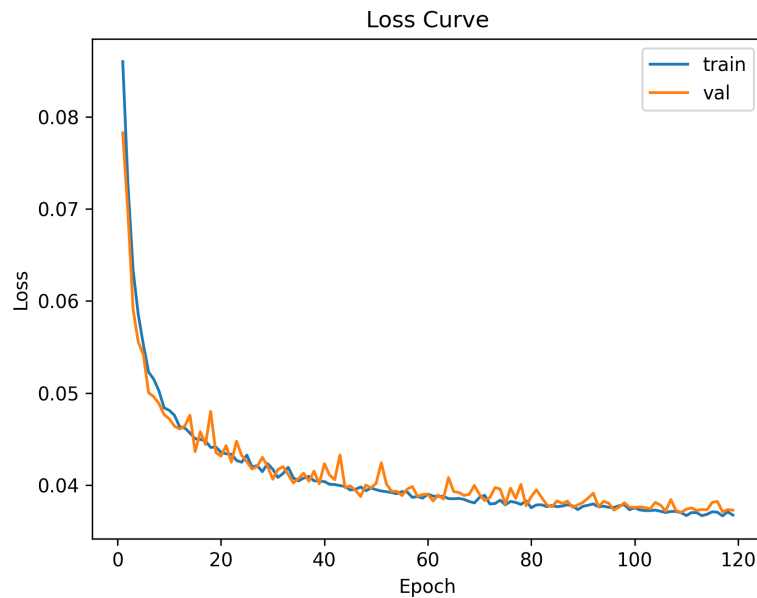

Figure 2: Loss curve for the forward noising U-Net. Both the training and validation loss stabilize at around epoch 100. The loss starts out jittery but it around epoch 120 it is stable. The generalization error is almost zero as well.

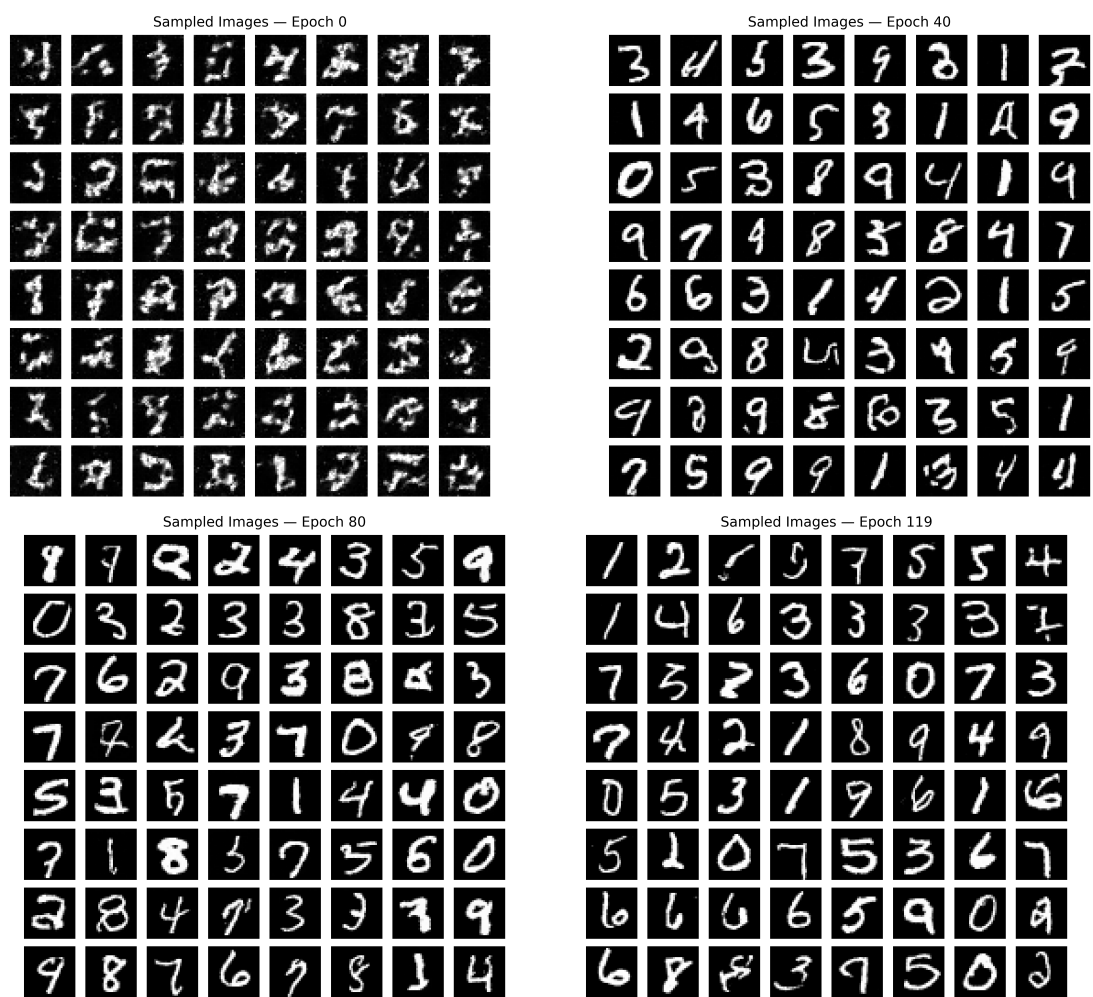

Figure 3: Samples generated at different epochs. The digits are formed around epoch 40 and there are tiny improvements as the epochs progress.
